Equipment
- Limited access to advanced agricultural technology
- Need for specialized machinery for soil restoration and drainage
- Maintenance issues with existing equipment

Environment
- Unpredictable weather patterns affecting project timelines
- Presence of invasive species complicating reclamation efforts
- Potential for soil erosion due to proximity to the river

Materials
- Availability of quality organic materials for soil enhancement
- Transportation challenges for delivering materials to the site
- Variability in seed quality for planting

Processes
- Delays in regulatory approvals and permits
- Inefficient project management practices
- Inadequate planning for utility installation (water, electricity)

People
- Lack of skilled labor for specialized tasks
- Insufficient training programs for staff
- Community resistance to changes in land use

Management
- Lack of clear communication among stakeholders
- Budget constraints limiting project scope
- Difficulty in measuring project progress and success

Potential Risks
